

The filtration unit's function is to purify and treat transformer oils.

**WHY OPT FOR VACUUM FILTRATION OF INSULATING OILS?**

- Quality regeneration of used transformer oils
- Degasifying and treatment of new oils prior to vacuum filling of transformers
- By-pass circuit for multiple quality filtration
- Fully automated mode
- Possible oil filtration of a directly connected transformer
- Oil quantity metering device
- Accurate vacuum gauge monitoring the pressure
- Precise measurement of water content in oil
- Energetically efficient
- Compact frame structure

The filtration unit TPF500 – 500 l/hr
